APCS2
Straight

12.5 x 11.0 cm

The straight connector (APCS2) is used when the spigot outlet on the WC is in line with the SWR pipework system.

APCC2
Collapsible

12.5 x 11.0 cm

The flexible connector (APCC2) is extendable from 22.5 to 55.0 cm and is very useful when the SWR pipework is at a significant distance from the WC spigot outlet or if it is in a vertical position.

APCO2
1.8 cm
Offset

APCO4
4.0 cm
Offset

12.5 x 11.0 cm **12.5 x 11.0 cm**

The two ranges of offset connectors (APCO2 and APCO4) are useful if there is a mismatch between the centres of the spigot on the WC and the SWR pipework. Offsets of up to 4.0 cm can be catered to, by these two WC pan connectors.

STUDOR COMING SOON Active Drainage Ventilation

Studor P.A.P.A. (Positive Air Pressure Attenuator) and Studor Air Admittance Valves (AAVs) provide a complete Active Drainage Ventilation solution, which is particularly suited to high – rise applications.

An active ventilated system provides relief at the Point Of Need (PON) by removing or attenuating an Incoming pressure transient that, if left, could lead to trap depletion.

The combination of the P.A.P.A., Maxi – Vent and Mini – Vent AAVs support a complete system to limit pressure fluctuations, guaranteeing the integrity of the traps.

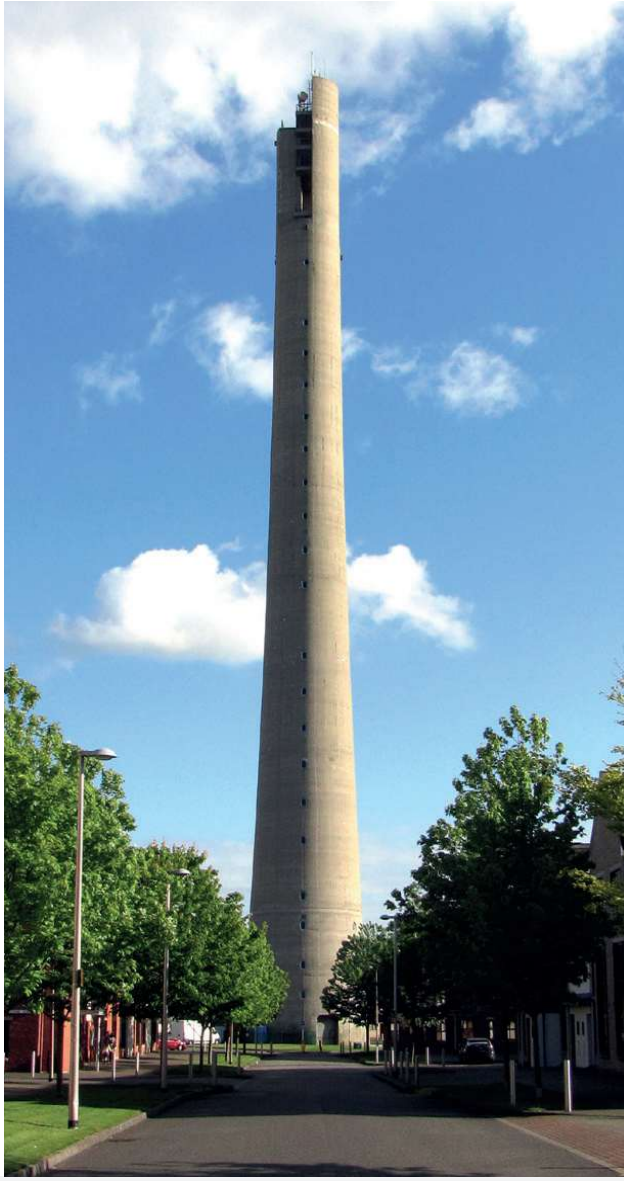
SEEING IS BELIEVING

See how water and air interacts in a true high-rise setting. The 'Seeing is Believing' experience is available in two unique testing facilities located in the UK and the Netherlands. They utilise clear pipe and completely visible products and fittings to demonstrate the occurrences within a real highrise drainage system and how they are managed by the P.A.P.A. System versus a conventional vent pipe system.



The National Lift Tower

The National Lift Tower hosts the world's tallest drainage testing installation, comprising a 96 metre soil stack fitted with the P.A.P.A. System (P.A.P.A. and AAVs) for active ventilation. Electronic pressure sensors in the test rig allow readings in the pipework to be recorded and used to objectively analyse the performance of the P.A.P.A. System versus alternative configurations.

Hydro-Dynamics Experience Centre

The state-of-the-art Hydro-Dynamics Experience Centre (HDEC) combines a testing facility with a customer experience centre, where customers can see precisely how water and air actually flow through our pipe systems. The HDEC is instrumental in testing new solutions and also simulates the performance of systems in specific situations for increasingly complex and/or high-rise buildings.

Heriot-Watt University

Founded in 1821 in Edinburgh, Scotland, and has established a reputation as a leading research-led university and provider of education around the world, with campuses in several locations including Dubai and Malaysia. Heriot-Watt and Studor have collaborated for many years on research and development on a range of innovative new products. The P.A.P.A. (Positive Air Pressure Attenuator) is one of the results of this partnership; many other developments are currently in process, with the potential to revolutionise the high-rise building drainage market.

Why Ashirvad Low Noise SWR?

Ashirvad Low Noise (silent and silent plus) SWR systems delivers excellent noise insulation values. Low Noise SWR system is a combination of pipes, fittings and brackets that is **specially designed to reduce the noise that accompanies during the flow of water and waste in the system.** They are made from an innovative Tripple layer uPVC structure, one of the finest technologies in the plumbing world.

About Foam Core

Foam core pipes are basically multi-layer pipes having outer and inner layers of conventional PVC and middle layer of foamed PVC. Outer and inner layers are designed to take the load as well as provide chemical resistance while middle layer of foamed PVC gives rigidity and maintains the shape of the pipe under load. Due to its ability of absorbing the load, foam core pipes are most suitable for underground drainage systems, where soil exerts a lot of pressure on pipe surfaces.

- Light weight and strong
- Dampening of vibrations and noise level
- High impact strength
- Wide temperature range
- Thermal insulation
- Water ingress prevention (resulting from filling of hollow space)
